BUSINESS PROGRAM

within the framework of INTERPLASTICA 2022

January 25, 2022

Polymer Plaza

As part of the first day of the exhibition's business program, the most important issues of the industry will be considered.

- State support for the polymer production and processing industry.
- Promising polymer production projects in Russia and CIS countries.
- Development of the grocery basket and interaction with the consumer.

- Market vision by the leading manufacturers of polymer raw materials.
- The main trends of the polymer industry. Overview of the Russian polymer production and consumption market.
- Polymer processing in Russia. Overviews of segments of polymer pipes, flexible and rigid packaging, window profiles, polymer building materials, rotary molding segment from key market players.

January 26, 2022

Recycling Solutions

Discussion platform entirely devoted to issues of sustainable development, waste management and polymer recycling.

- The current status and prospects of the waste management segment in Russia.
- New polymer recycling projects.
- The view of leading petrochemical companies on the economy of sustainable development.
- Overview of the plastics recycling segment in Russia.
- Extended manufacturer's responsibility and disposal regulations.
- Modern technologies and effective solutions for polymer recycling.
- Overviews of the segments of the recycled products production.
- Waste management in Russia through the eyes of retailers and FMCG companies, projects in the field of sustainable development.

International Conference «Smart Molding Russia»

Venue: Hall DI, Pavilion 1

- Comprehensive solutions in the field of injection molding.
- Automation of the molding process.
- Control systems for the operation of the injection molding machine and the mold.
- Usage of robots and smart peripherals.
- Measurement and controlling of the process and product quality.
- Labeling and decoration in the form.
- Precision casting.
- Micro-casting.
- Simulation and modeling of injection molding processes.
- The latest molding technologies (including 3D molding).
- Smart raw materials with special properties.

January 27, 2022

Polymer Plaza

Current problems and promising trends in the polymer industry.

- Logistics segment. Tools and solutions for the polymer industry.
- Pandemic as a growth factor. Successful cases of polymer processing companies.
- Industry 4.0 in the polymer industry.
- Digitalization, Big Data technologies.
- Application of robotics and artificial intelligence.
- Innovative products for companies in the polymer industry.
- Development of the institute of polymer exchange trading.

V Forum of the Russian Federation Association of Plastic Processors.

- Prospects, features and tasks of exchange trading in basic polymers in the Russian Federation.
- Organization of separate collection of household waste as a way to increase the volume of their processing.
- Training of personnel for the industry.
- The absence of domestic engineering in the field of plastics processing – an extreme form of import dependence.

January 28, 2022

Report-back election meeting of the Russian Federation Association of Plastic Processors.
